Collection evolution

Chester Fritz's changing collection and space strategies

April 10, 2018

Shelby E. Harken

shelby.harken@library.und.edu

Stagnant stacks

- Our stacks were full and patron usage was down

- We were talking about weeding.

- We had moved old reference runs and old journals to a storage location. They weren't getting retrieved. After a lengthy review process, most were deaccessioned.

- The reference collection was heavily reviewed and many older sets either moved to stacks or were deaccessioned.
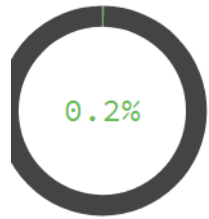

So…

- Architects came to provide possible renovation plans. In their statistics for building design, too much space was being taken up by volumes

- We paid for OCLC's GreenGlass product. It allows you to scope your collection and work on the areas you decide on.

- At the time they didn't work with serials. They do now. That means serials housed in general stacks are missed.

- We told them to put books about North Dakota or published in North Dakota in a special category. Those would then be able to be excluded from any lists we made.

Evaluating

- I used GreenGlass to pull a list of books from our general collections that met our Rare Book Policy criteria so they could be pulled and evaluated

- Bibliographers can create lists that include our barcodes based on call number. Once they have reviewed it, they can send it their faculty for comment.

- We had asked OCLC to identify high ILL partners, if held by the University of Minnesota, and how many libraries hold the title

- If there are over a hundred libraries and easily borrowed, it became a candidate to deaccession.

Public interface

- I extract the barcode column, run it through p-manage 70 and 62 CHECK to update the items with a code.

- Will worked with Al at ODIN to run a bi-weekly report that populates a program Will wrote using that code for our web page listing titles being considered for deaccessioning.

- People with und.edu email can request to reinstatate or request the deaccessioned copy for themselves.

Web page

Deaccessions

Every other Monday, CFL will post updated lists of books scheduled for deaccession on this page, and withdraw those that were previously listed. Books listed on this page are available at the library for inspection. If you are UND faculty, staff, or student, you may use the links below to request that a book be reinstated, or to volunteer to take the copy. For more details, see our withdrawal policy.

Current Withdrawal Candidates

The following 323 books are currently scheduled for deaccession. (Ordered by call number, then date.)

Title	Author	Call Number	Published	Notes	Request Reinstatement	Claim Copy
Active network design with signal filtering applications	Lindquist, Claude S.		1977	Duplicate	request reinstatement	claim copy
The rolling head	Tall Bull, Henry.	398.2097 T147r	1971	Duplicate	request reinstatement	claim copy
Thought patterns.	St. John's University (New York, N.Y.)	AS36 .S26	1950	v.10- Duplicate	request reinstatement	claim copy
The Catholic worker.	Day, Dorothy, 1897-1980.	BX801 .C36965	1933	v.78-79(2011-2012) 14 items	request reinstatement	claim copy

Inventory of	University of	CD3319 .U53	1972		request	claim

Shared print

- OCLC Greenglass can be used in the OCLC Shared Print Program
- Libraries who agree to participate do a usage and overlap analysis
- The idea is that one or more of the libraries in a group agree to keep a copy of a title forever or for a set number of years allowing other libraries to deaccession that title
- A shared print holding type flag is set in WorldCat and the bib record gets a 583 and a LHR is created
- sys 437193 OC 2760237
- 583 commitment to retain ‡c 20151204 ‡2 pda ‡5 OTUTLD

Other projects

- We sent students to the stacks looking for duplicates as did shelvers. They were checked for usage. Very high usage AND very local we might keep 3 copies, but generally no more than 2. Low usage, only 1 copy.

- We collapsed a local history collection into the general stacks by following the same criteria.

- We moved State Documents out of Special Collections with the eventual goal of shelving in proximity to federal documents. In that process we also found a lot of duplication in Special Collections, documents and stacks. Again, we got rid of duplicates.

More

- We reviewed directories and yearbooks, especially those no longer received. We deaccessioned many old volumes.

- titles. If the title was held among our ILL partners, UofMINN, and 100 other libraries, we decided not to keep it.

- We decided not to keep newsletters and similar journals without long-lasting importance.

- We reviewed old general periodicals. Many of these were available in HathiTrust, so the title was cataloged as an online journal, noting the holdings available.

More and more

- British Parliamentary Debates have a great online index and are available through HathiTrust. So except for the very oldest volumes (rather rare), we deaccessioned those.

- Certain areas of study are no longer taught on campus, so those books we reviewed and generally deaccessioned, e.g. Home Economics, old Library Science, old medicine, etc. Outdated computer books were easy to do.

- We have made a concerted effort to buy JSTOR journal packages, so we can deaccession the print volumes. We would like to buy more.

More to do

- We are now at the stage of addressing philosophy, literature and history. This is much harder, but we will persevere.

- We a looking at old microform runs

- We are looking at more JSTSOR

- We are looking a long runs of old journals

What we have changed

- Despite very poor budgets for several years, we have moved from print to online databases and resources.
- We buy some ebooks instead of print
- We have cancelled most of our print journals in favor of online access.
- We catalog ebooks available through e-journal packages
- As a federal regional depository, we have to keep materials we have received. Whenever we can, we have selected online over print or microfiche. We catalog all federal online documents.
- As a state documents depository, we catalog online as much as possible in addition to the print we receive

Acquisitions changing

- We signed up for the JSTOR evidenced based package. We paid a set amount at the time. Based on usage, we will be able to pick which titles to keep. I created a separate Aleph collection for the EBA titles. For those we keep, the collection code will need to be changed, along with a few other edits. If we cancel, I will have to delete all the records – bummer.

- I utilize OCLC's WMS to generate files I can process through MarcEdit (and if I need to check for dups, also through Aleph) and add to the catalog.

- We have over 229,000 electronic resources in the catalog

Why all this weeding and cataloging online?

- We want to be a modern library, not a book warehouse full of unused material. The collection needs to be dynamic.

- The space in the library needs to provide services people want to use.

- It is important that we refine our collections to appropriately meet users' needs. The practice of research and learning is changing and outputs are diversifying. The library needs to organize itself around the workflows of research and learners, including print and digital resources. Deaccession work is part of right-scaling management of print resources.

What's new

- We remodeled the original reference/study area. It is getting much more use since its upgrade

- We have established our institutional repository, Commons.und.edu . It will contain theses, digital images of local history, texts from our Archives, locally produced ebooks, large data sets, etc.

- We have installed a MagicBox to display a multi-media interactive exhibit. It can pull from multiple digital sources and display them to users who can manipulate the screen.

Visions of Substance

Brandon R. Olson and William R. Caraher

With the advent of low-cost and easy to use 3D imaging tools, the discipline of archaeology is on the cusp of a major change in how we document, study, and publish archaeological contexts. While there are a growing number of volumes dedicated to this subject, Visions of Substance: 3D Imaging in Mediterranean Archaeology represents an accessible and conversational introduction to the theory and practice of 3D imaging techniques in a Mediterranean and European context.

The War with the Sioux

Karl Jakob Skarstein

Translated Melissa Gjellstad and Danielle Skjelver With contributions from Dakota Goodhouse and Richard Rothaus

The Dakota War (1862-1864) ranks among the most overlooked conflicts in American History. Contemporary with the American Civil War, the Dakota War featured significant fighting, tactical brilliance, and strategic savvy set in the open landscape of the Northern Plains in Minnesota and North Dakota.

Karl Jakob Starstein's The War with the Sioux tells the story of the Norwegian

LIVING ART MUSEUM: GORECKI ALUMNI CENTER

Art may appear anywhere you turn at UND thanks to our Living Museum. You might see an 18th century painting in one building and then an Andy Warhol screen print in another.

Expanding art beyond the confining walls of a traditional museum building, the Living Museum does much more than decorate the campus. It is a very important part of educating students, allowing us to teach and research what art is and is not.

More

- We have a Video room. We hope to improve it's visibility by moving journals downstairs.
- We will soon have a data visualization wall. (formerly at: http://und.edu/research/computational-research-center/visualization.cfm)
- We will soon have a one-button studio where students can practice speaking, debating, interviewing, or creating a video for homework.
- We have 3 collab stations. Each workstation is mounted on a mobile cart with a 46-inch display. The workstations include a wireless keyboard and mouse. A webcam is integrated into each workstation for video group chat and conferencing
- We have print and microfilm scanners and will soon have a large format scanner we can use to digitize large format items.
- Sociology streaming videos from credo reference to be shown in classroom or through Blackboard
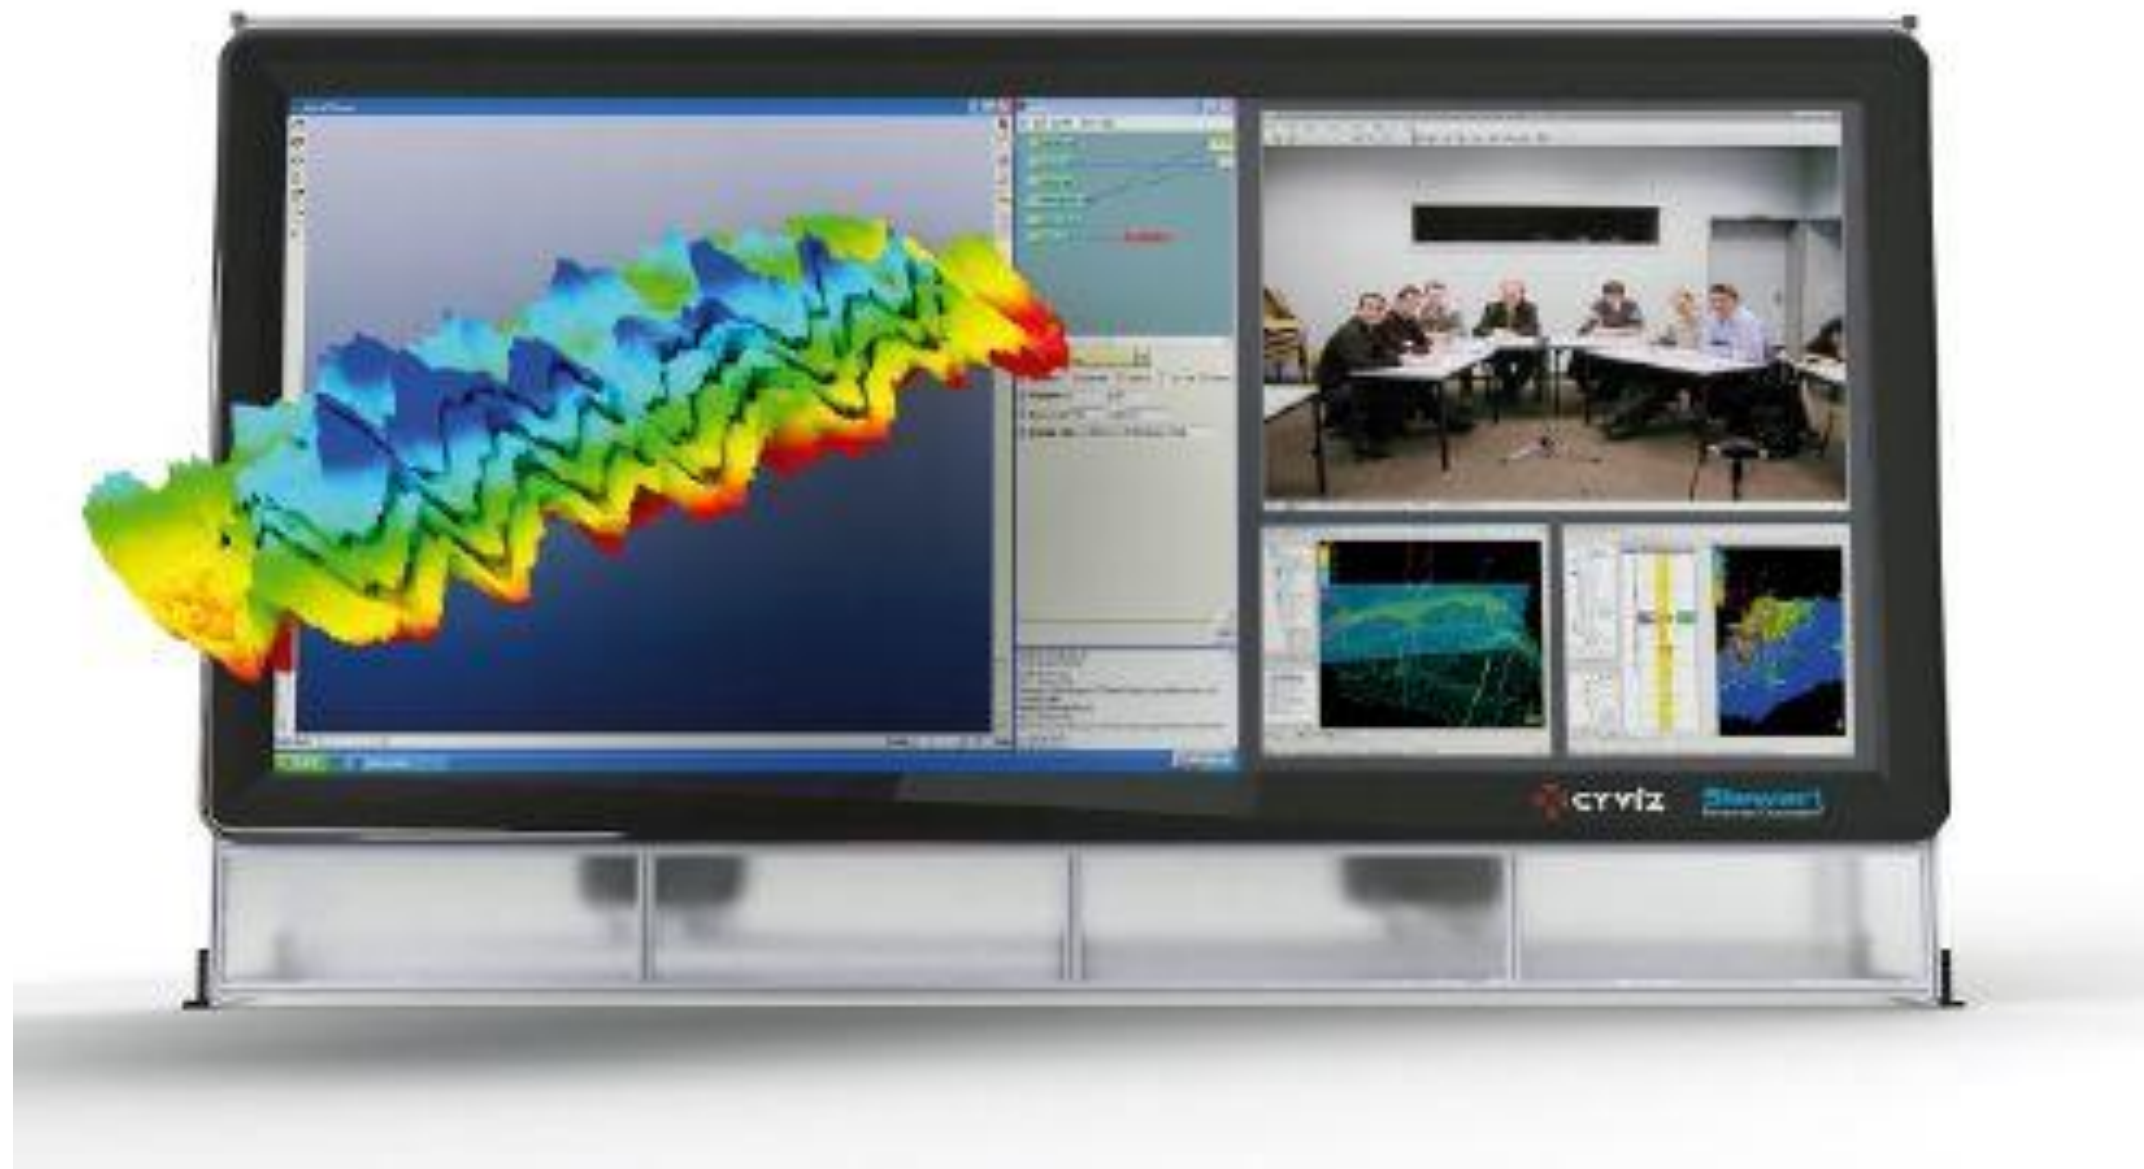

Not ours yet…

But we want more …

- We want more staffed IT support options for students.
- We want smart study rooms that we can schedule electronically
- We want to bring in more services (negotiating for them can be challenging)
- We want compact shelving to pull more off of visible space
- We want spaces that promote collaboration and creativity – active learning spaces
- We want laboratories where students experiment with data mining and 3D printing and virtual reality

And..

- We want cutting-edge digital platforms for knowledge discovery and management – Commons.und.edu is just a start

- We want to assist students and scholars around the world in creating new scholarly publishing tools, and sharing information globally.

- Maybe Google Jamboard to update collab stations
