Reports

Scheduled Queries

The Collection Tool is designed to provide information assisting purchasing and cancellation decisions. This includes information about which titles with what coverage are gained with the purchase of a new package and which titles with what coverage are lost with the cancellation of a package.

It allows the comparison of the following sets of data. (Click on the selected option to start the wizard)

- [Compare packages/sets of packages](#)

- [Check for duplicate titles within your holdings](#)

This option creates a report on unique coverage versus overlap using the active FT holdings list.

- [Check where titles are available from and what your coverage is in each package](#)

This option creates a report based on a list of titles that you submit. The report includes information on unique coverage versus overlap for these titles.

Note: The tool includes only titles that are available in electronic fulltext (getFullTxt service); it does not include abstract or table of content services (getAbstracts, getFullTxt).

The tool creates different output reports depending on what conditions are chosen.

Example: A comparison between one package and a set of packages, including date coverage, creates reports for:

- Unique titles - Titles that exist in only one of the two sets
- Title overlaps - Titles that exist in both sets
- Complete overlaps - Titles that exist in both sets and have identical date coverage
- Partial overlaps - Titles that exist in both sets and have overlapping but not identical date coverage

Other tabs:

- Last results - Contains the last run query with links to the reports
- History - Lists previously run queries including links to the reports
- Scheduled queries - Lists all the queries that are scheduled to run at a later time
