O40 contain \$e rda

Note that this comes before the \$c .

Order of 040 subfields

The preferred order of 040 subfields is: a, b, e, c, d. This moves the key identifiers of language of cataloging (b) and cataloging code (e) closer to the beginning of the 040 string as a consistent place for easy identification by other catalogers.

Fixed Field: DtSt = t

Publication and copyright date

Dates = 2009, 2009

OCLC RDA Policy Statement

OCLC member libraries may contribute new unique records to WorldCat formulated according to any cataloging code they are currently using. OCLC will not require libraries to use RDA.

<http://www.oclc.org/rda/new-policy.en.html>

Copy Cataloging

Libraries may choose to use existing records as is or locally edit them as needed. Catalogers are not required to upgrade master records to change them from non-RDA codes to RDA. Do not change RDA master records to conform to an earlier cataloging code.

Upgrading/Enhancing Existing Records

When using a record for copy cataloging, catalogers have the option, of enhancing or upgrading that record. Catalogers have always been allowed to "upgrade" pre-AACR2 master records to AACR2. Beginning March 31, 2013, catalogers may change/upgrade master records cataloged according to a non-RDA code to RDA. Do this only with the "piece in hand" in order that all necessary information will be available. When re-cataloging to RDA, the entire record must be examined and adjusted as needed before re-coding the record as RDA.

Catalogers may continue to enrich existing records with addition of fields such as call numbers, contents and summary notes, subject headings, etc. without adjusting coding of the record to RDA. Do not change an RDA master record to conform to an earlier cataloging code.

Machine Manipulation of Existing WorldCat Records

OCLC will begin changing existing WorldCat legacy records after 31 March 2013 to incorporate various useful RDA practices.

Legacy records (non-RDA records) need to be made as functional as possible in the future RDA environment to benefit catalogers, systems, and catalog end users. As a post-MARC future becomes a reality in years to come, greater consistency of practice present in existing WorldCat records will allow easier migration to another metadata format.

OCLC Connexion

One or more headings were controlled and linked. At least one heading matched a cross reference in an authority record. The heading in this record has been updated to reflect the established form of the heading.
All controllable headings were controlled.

Other topics?

Discussion followed regarding how records display in the OPACs. Since we are a consortium and share views of records it would be helpful to our users to see the same kinds of displays from library to library.

Catalogers were wondering the consortium could make some sort of guidelines that we as a state would follow regarding displays.

Specific concerns were the use of all caps, which some libraries use in their order records and use of gmds, which for some this is the way users identify material type. Are there others?

Can we discuss this via the listserv?

Need more information or want to ask a question?
